

## Abbas Apparel Machinery Company

Abbas Apparel Machinery Co. specializes in machinery and plant for textiles, garments (jeans, trousers, shirts, ladies wear), knitwear (polo shirts, T-shirts, tops and bottoms), leather garments, leather products, shoes, socks, lingerie, gloves, hometextiles, other similar products with a strong service department of machine technicians and electronic engineers, most of whom have received overseas training. Abbas Apparel provides customers with quality goods at competitive prices, accurate information, proper guidance, installation, prompt and satisfactory service. Following are the principals of Abbas Apparel Machinery Co. which will present their machinery at the Textile Asia show:

### Gerber Technology USA

Gerber Technology is the world leader in CAD/CAS/CAM hi-tech cutting systems for apparel and soft goods, providing accuracy, speed and fabric savings never achieved before e.g. 2.4 meter wide automatic spreading systems for home textiles, special knives and cooling systems for kevlar and other technical textiles, high speed cutting of denim jeans and knitwear etc. Gerber Technology USA will exhibit the AccuMark™ Computerized Pattern Design, Grading and Marker Making System and Nester Automatic Nesting System for AccuMark Systems to further save fabrics.

GERBER presents AccuMark™ automatic solution for pattern design, grading, marker making and pre-cutting operations.

### Eton Sweden

Eton Systems offer computerized overhead unit production systems for garments and home textiles, and provides upto 80-90% higher productivity due to reduced material handling time. The computer system allows on-line monitoring of the production and quality of the garment and home textiles. Work-in progress is reduced dramatically, saving financing costs and expediting shipments.

Eton Systems provide material handling systems consisting of overhead conveyor with individually addressable work stations.

### Tonello Italy

When jeans factories in Pakistan want to set up a washing plant, they think of Tonello Italy, the leading manufacturer and supplier of computerized washing and dyeing machines. Due to the low liquor ratio of Tonello machines, many customers prefer barrel machines for washing, and with a liquor ratios as low as 2.5 to 3%. The high speed Tonello dyeing machines with jet system, offer huge saving of water and chemicals, and can give a return on investment within one year. The high quality of Tonello machines provide trouble free operation for years, which has been made possible due to robotic production methods, just like in car factories, and R&D collaboration with the Government of Italy.

### Vibemac Italy

Vibemac has continuously provided the jeans manufacturers of Pakistan with the latest technology in flexible automatic sewing machines. Its revolutionary 2 colour machines for pocket designing 1O1OV4DLC, pocket hemming V700, pocket setter 2516V4 and J stitching machine 1O1OV4F1 provide the Pakistani exporters more opportunities for value addition to achieve better prices and profits in the long run.

V700 - Automatic back pocket hemmer is one of the new unit Vibemac presented in 2009.

### MACPI

Finishing equipment by Macpi (Italy) have no match for quality and hi-tech equipment based on continuous research and product development, the latest of which are bonded Lingerie (bras and undergarments) and jeans without stitching.

### M&R USA

M&R from USA maintains its world leadership with continuous investment in terms of new product developments in screen printing. Its latest model ALPHA 8 can print upto 80 cm x 110 cm size in unlimited colours. Now, exporters in Pakistan need not to refuse orders with multi-colour large size prints on their knitwear, as ALPHA 8 is an automatic textile press which offers limitless expansion in six stations increments. Since ALPHA 8's oval shape takes up less floor space than comparable carousel presses and it makes efficient use of available production areas.

ALPHA 8 features M&R's Plug and Print modular design for limitless expansion in six-station increments.

### In Hyun Precision Co.

In Hyun Precision Co. is one of the leading manufacturer of Automatic snap attaching machines and hot fix setting machines. It has provided tremendous increase in production efficiency of Pakistani exporters in attaching rivets, buttons and eyelets to their jeans.

Gone are the days of laboriously attaching them one by one, or changing the channel guides for each change of size. The average output of these inexpensive electric and compressed air operated machines is 15,000 in a 10 hour day. ♦

Fully automatic rivet attaching machine.
